## **Revolution Rod Types**

3-Wrap: 3-wrap rods are in the middle when it comes to strength and weight. They are similar in stiffness to the 2-wrap and 4-wrap rods. These rods should be used in moderate winds. 3-wrap rods are identified by their label with either 3 feathers or the words "Ultra Light" with an internal diameter of ¼ inch.

4-Wrap: 4-wrap rods are the heaviest and strongest of the basic rods. They have similar stiffness to the 2-wrap and 3-wrap rods, and should be used in high winds. 4-wrap rods are identified by their label with either 4 feathers or the words "Revolution Equipped" with an internal diameter of ¼ inch.

## **Unique Rods**

SLE: The Super Leading Edge (SLE) is a large rod with a ½ inch internal diameter. These rods are the largest, heaviest, strongest, and stiffest of any rods for the Revolution kite. These rods are only used in the leading edge of the kite. SLE rods are identified by their massive size.

Race Rods: Race rods are a unique type of rod for light-wind use. They are slightly more flexible than the basic rods, and have a higher strength to weight ratio. These rods are mainly used in lower winds as an alternative for the 2-wrap rods. Race rods are identified by their flame label with the word "Race" with an internal diameter of ¼ inch.

Green Race Rods: The green race rods are a heavier and stronger version of the race rods. They have a similar stiffness to the race rods and are used in moderate to high winds. Green race rods are identified by their green tint and a flame label with the text "Race Rods" with an internal diameter of ¼ inch.

Indoor Rods: Indoor rods are the lightest and most fragile of any Revolution rod. Indoor rods are slightly longer than a standard rev 1.5 rod because they are only used in the Rev Indoor. These rods are identified by a label with one feather and an internal diameter of ¼ inch.. Older Indoor rods may have a variety of labels, and some even have an internal diameter of 1/8 inch.

Zen Rods: Zen rods are lighter than the race or 2-wrap rods. They are identified by a black label with the text "Revolution Kites", some Japanese text, and two yin-yang symbols with an internal diameter of ¼ inch.
